

## GREEN BIKE USA

---

### Quick Start Guide Model GB1

Thank you for buying your new electric bike from us.  
Please use this quick start guide to ensure that you will get the most from your new purchase.

1. If your box came damaged please take pictures on your phone and let us know right away. Please take the bike, the seat and the charger out of the box. Put away the protective materials around the bike and keep the box for now.

2. Unfold the frame and the handle bar. Make sure that the quick folding mechanisms of the handle bar (A) and the frame (B) are closed tightly.

3. Insert the seat into the seat bar, **make sure it's inserted to at least the minimum length**, which is marked on the seat bar. Adjust the seat quick fit mechanism by turning the bolt until it's tight.
4. Please check tires pressure. We recommend 50 psi.
5. Turn the battery **ON** by inserting the key to the battery and turning it all the way clockwise to the **ON** position (at this position you can't take out the key from the battery). The **LED display (C)** will turn on.

The red lights dots will indicate the battery level (you can check also by pressing the other indicator that is located on the battery). You can use the **Plus** and the **Minus** buttons to change the motor assist level. On low you get less power from the motor and you need to use more the pedals and on high you will get the full power from the electric bike. The light button is to turn on and off the front and the back light.
